AutoDBA™

Are database chores getting you down?

You know who you are. You're the DBA who can't focus on exciting projects because you're constantly battling tedious, time-consuming database administration and maintenance chores.

If cleaning up your to-do list is at the top of your list of things to do, we can help.

AutoDBA is a new, innovative tool that automates critical database duties, thereby lowering the cost and time associated with running Oracle databases (*our newest release supports 9i*). From storage management to object rebuilds, AutoDBA monitors, predicts, and corrects database issues 24x7x365.

The result? You're free to focus on those high-value deliverables that you haven't had time for. And you can be confident that your database is clean, reliable, and running smoothly.

With AutoDBA, you can really clean up.
