

Of Course You've Heard Of Videoconferencing.

But Have You Heard Of Life-Size, Eye-To-Eye Videoconferencing With No Audio Or Video Delay?

Perhaps the best kept secret around, Fortune 500 companies have been using TeleSuite® systems since 1999 to communicate with colleagues around the world as if they were sitting at the same table.

Our patented design dispels preconceived notions of videoconferencing with DVD-quality video, eye-to-eye contact, crystal clear audio and zero latency.

Destiny Conferencing's mission is to connect people everywhere, transcending geographical barriers with this innovative technology called interactive telepresence.

3,000 Miles Apart And It Feels Like You're In The Same Room.

In the comfort of luxury board rooms, groups across the country or across the world can interact in face-to-face meetings on life-size screens, picking up on the subtleties of nonverbal communication that are often more telling than words. The studio lighting along with hidden cameras and microphones make for a natural, comfortable meeting environment.

The result? A more personal — and more productive — experience than a faceless conference call or, worse yet, TV-on-a-cart videoconferencing. TeleSuite® systems also allow for all-at-once group interaction rather than the one-person-at-a-time limitations of Web-based conferencing.

Say Goodbye To Headaches And Tech Support — And Hello To 98% Uptime.

Use of traditional videoconferencing has never been widely embraced as a substitute for travel, not only because of poor quality, but also lack of reliability. At Destiny Conferencing, we've engineered the solution. Our systems operate on a network backbone that's 99.999% reliable — meaning about 5 seconds of downtime per year.

And, due to four redundant Network Operations Center (NOC) locations, we're able to guarantee service levels of 98% system uptime to our customers. If a problem does arise, our minute-by-minute monitoring of more than 200 operational measures allows us to remotely fix most issues before they're even noticed.

Each TeleSuite® system is remotely supported 24x7, so there's no longer any need for an IT specialist to work out the kinks. You just schedule a meeting and, when you walk in, everything is up and running.

With Usage Rates 5x That Of Traditional Videoconferencing, People Are Competing For Time Slots.

Although the use of TeleSuite® systems has cut travel costs dramatically for some of our customers, they often tell us that the real benefit lies in the collaboration and communication that wasn't happening at all prior to owning a suite.

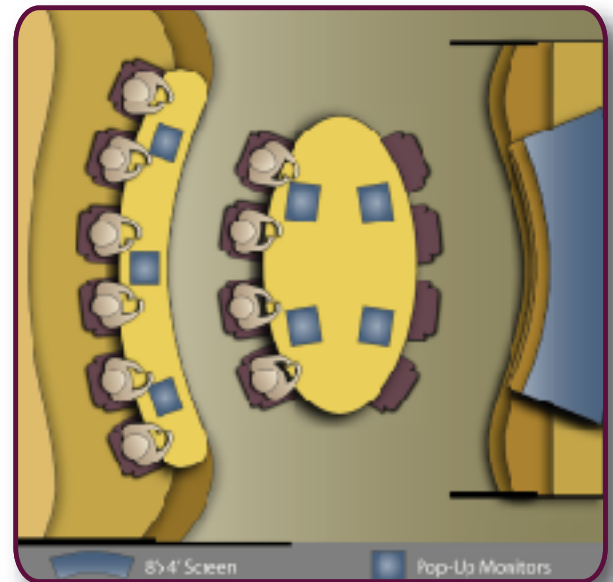

Whether you're connecting with vendors, customers or different locations within your own organization, Destiny Conferencing can effectively eliminate the physical distance that causes miscommunication and impedes progress. A large percentage of our customers continue to buy additional suites because they've become such an integral part of their company culture.

Versatility For Any Meeting.

Although our life-size videoconferencing capabilities are our trademark, TeleSuite® environments can be used for a variety of purposes. Each suite is a room-within-a-room, with furnishings and surroundings that create an impressive look and feel. Whether participants are on screen or off, the studio lighting and acoustics enhance any meeting. The environment has integrated technology, making it suitable for sales presentations, employee training or just general conferencing purposes. With wireless LAN, embedded monitors, DVD/DVR capabilities and a built-in PC, users have all the resources they need for data sharing — whether they're in the same building or not.

Our product lines can seat anywhere from four to 28 people, or we can custom-tailor our modular furnishings to accommodate nearly any space or need, from executive offices to lecture halls.

With Destiny Conferencing, seeing really is believing. Call us today to set up a visit at the TeleSuite® location nearest you.

TeleSuite® Model 210M

Not Just For Videoconferencing.

Sales presentation room.

- High-end clientele will appreciate the luxury surroundings and embedded technology, even if they're not using the screens.
-

Traditional boardroom.

- Conference room space is always at a premium. Suites don't sit empty when there's no videoconference scheduled.

Guest presentation room.

- Each suite is equipped with all the bells and whistles needed for vendor presentations.

Training and education room.

- Whether on-screen between multiple locations or at a single facility, employees can be trained right in the building.
