

## Credentialing Software

***Make Your Credentialing Process Timely and Manageable***

### Overview

Every medical service provider must provide their credentials to the organization for which they are providing the service before they are eligible for full reimbursement. The process of giving this provider information to the organization is called credentialing. Credentialing includes the initial enrollment process. A recredentialing is typically required every two years.

**Wybtrak, Inc. developed Credentialing software in order to automate efforts and transform the complex and burdensome credentialing process into a manageable task.**

### The Problem

The problem with the credentialing process is two-fold:

- The intensive amount of labor involved in obtaining, gathering, verifying, and maintaining the information for each credentialing application.
- The effort in transcribing the information to each of the numerous applications.

"Where does the doctor keep his curriculum vitae?"  
"Is it current?" "What is the status of her CMEs?"

These are questions that cause enormous stress on the credentialing staff. A large portion of the credentialing staff's time is spent gathering and verifying this information. This presents an overwhelming burden to both providers and their staff.

In addition to general time requirements, the data submitted must be current and date/time-stamped. Each person must be accountable for producing deliverables on time and in accordance with NCQA requirements.

### The Solution

Wybtrak's Credentialing software is a critical asset to medical service providers, credentialing verification organizations, management service organizations, managed care plans, and practitioner networks. It dramatically reduces the time and resource requirements surrounding the credentialing process.

Wybtrak's Credentialing software consists of a user-friendly interface that helps organizations enter, manage, and organize provider information. This information is stored in a relational database that acts as the back-end to the software. The data resides with the client, is owned by the client, and controlled by the client.

Once the provider's information is added to the database, completing a credentialing application is simple. Just select the necessary form, a provider's name, and print! The appropriate information is extracted from the database and can be used to populate an endless variety of credentialing applications. In addition, documents such as educational diplomas, medical licenses, DEA licenses, pharmacy licenses, board certificates, and CME certificates can be easily scanned, saved, and printed with the credentialing application.

### It's That Simple!

In addition to being a unique business management tool, Wybtrak's Credentialing software is also a savvy training resource. If you are new to the credentialing process, the software provides an intuitive interface to learning the ropes.

Wybtrak's Credentialing software was designed with the end-user in mind, so you don't need a degree in information technology to run it. Better yet, it is practical, affordable, and can be installed and put to use in minutes.

***Make it Simple. Make it Wybtrak.***
