

Credentialing Solution

The Practice Perspective

Overview

Dramatically improving the efficiency and economics of the credentialing enrollment process for healthcare providers is an objective shared both by providers and Wybtrak.

The following case study highlights some of the benefits associated with Wybtrak's Credentialing Solution.

Client Profile

Private physician practice, 23 physicians, 35 credentialing applications including multiple hospital and payor contracts, one full-time clerk dedicated exclusively to managing the credentialing enrollment process, licensing, CME tracking, and hospital privileging.

Problem

Prior to installation, the Credentialing clerk was overwhelmed by the management of the credentialing process (tracking CMEs, license expirations and completing credentialing/recredentialing applications for Medicare, Medicaid, managed care firms, hospital privileges, etc.). Deadlines and billing opportunities were missed and the clerk had no time for additional duties.

Solution

The practice installed Wybtrak's Credentialing software and populated it with data specific to the practice's operations. Since completing the installation, the Credentialing clerk has been able to manage the entire process, proactively, in less than 10% of the time it previously required. *(After the original installation, the practice added 12 additional providers and over 30 payor contracts. The clerk still manages the credentialing process in less than 10% of the time previously required.)*

The reporting tools included with the software program allow everyone in the practice to be well-informed about the key elements of maintaining provider credentials. At any point in time, an audit trail is available for review. In addition, reports can be generated that identify the credentialing status of each physician for each application, the expiration dates of licenses, privileges and CMEs, and more. The credentialing function is now manageable and the Credentialing clerk can contribute in other ways that enhance the practice's business.

The dramatic improvement in productivity achieved by this practice is commonplace for the many organizations (representing thousands of physicians and healthcare providers) utilizing Wybtrak's software.

Wybtrak's Credentialing Solution addresses provider credentialing needs more effectively than other approaches. The software and service empowers organizations with a database they own and the ability to populate the unique credentialing applications required by each credentialing entity. This approach overcomes the challenges that have typically stymied the deployment of a universally acceptable, cost-effective credentialing solution.

The total cost of credentialing for physicians, residents, and other providers is an acute, ubiquitous problem. By deploying Wybtrak's Credentialing Solution in your organization, you can solve the credentialing enrollment problem immediately.

It's That Simple!

Wybtrak's Credentialing software was designed with the end-user in mind, so you don't need a degree in information technology to run it. Better yet, it is practical, affordable, and can be installed and put to use in minutes.

Make it Simple. Make it Wybtrak.
